Education

Meridale University, Meridale May 2023
Bachelor of Science in Information Technology; Minor in Statistics GPA: 3.6/4.0
Coursework: Web Development, Machine Learning Fundamentals, Databases, Applied Statistics

Projects

Road Accident Severity Prediction Apr 2022 – Apr 2022

Python, Jupyter Notebook

- Built a Random Forest model in Python to predict road-accident severity from a 12,000-record police dataset, deployed locally for testing.
- Cleaned and explored the accident dataset with pandas, working through inconsistent fields before feature selection could stabilize model performance.

Web App Flight Price Oct 2021 – Nov 2021

Python, Flask, HTML

- Developed a Flask web app serving a Random Forest flight-price model, deploying the pairing to Heroku for public use.
- Reused patterns from the accident-severity project, translating a web development background into building this deployable prediction service.

Activities & Extracurriculars

Meridale ML Reading Group, Co-founder Feb 2022 – Apr 2022

- After noticing the flight-price project relied on a model treated as a black box, started a peer reading group on evaluation methods.
- Later extended that curiosity to text data, prototyping a news-category classifier, and found debugging language models more engaging than building interfaces.

Skills & Interests

Language: Python

Backend: Flask/FastAPI

Data: Data Analysis (pandas), Data Visualization

AI/ML: Machine Learning
