Education

Larchmont Institute of Technology, Larchmont Vale June 2027
Bachelor of Science in Computer Science; Minor in Interaction Design
Coursework: Human-Computer Interaction, Distributed Systems, Technical Writing for Engineers

Projects

Logdoctor Mar 2026 – Mar 2026

JavaScript, Shell

- Built a command-line log analysis tool comparing OpenAI, Anthropic and Google LLM providers, using chalk and inquirer for interactive output.
- Focused on making dense log output scannable in the terminal, after early versions were hard to read at a glance.

Cloudinferops Mar 2026 – Jul 2026

Go, TypeScript, Python

- Built a Kubernetes-native CLI in Go for deploying, monitoring and benchmarking LLM workloads, with CI, tests and Docker packaging.
- Organized the 150-file codebase and its command structure so operators could find the right subcommand without reading source.

Kubeops Platform Dec 2025 – Mar 2026

Shell

- Wrote automation scripts deploying a full observability stack to a local Kubernetes cluster in a single run.

Activities & Extracurriculars

Larchmont Open-Source Study Group, Documentation Contributor Jan 2026 – Present

- New contributors to a shared campus tooling repo often gave up after the setup instructions assumed too much prior context.
- Rewrote the onboarding guide with a clearer structure and screenshots of expected terminal output at each step.
- Realized clear formatting changed whether people finished onboarding at all, more than the accuracy of the instructions did.

Skills & Interests

Language: Shell Scripting, Go, Python, JavaScript

Frontend: HTML/CSS

AI/ML: LLM Application Development

DevOps: Kubernetes, Docker, CI/CD

Quality: Unit Testing

Product: Technical Writing
