Experience

Fenwick Cross Community Testing Site, Fenwick Cross Jan 2020 – Dec 2021

Testing Site Coordinator

- Managed paper-based logging for lateral flow test results during a high-volume period, where duplicate and lost records were common.
- Began building small spreadsheet macros to catch duplicate entries, then learned C# to build a proper logging tool for the site.
- Trained two colleagues on the new system, which reduced the back-and-forth needed to correct mismatched entries during the next wave.

Projects

COVID 19 LFT Logging System Mar 2021 – Jan 2022

C#

- Built a C# logging system for recording and reporting lateral flow test results, replacing the site's paper-based process.
- Designed the upload flow around a multi-record submission method used by testing institutions, still in active development.

Wake

Jan 2020 – Mar 2022

C#

- Wrote a command-line Wake-on-LAN tool in C# to remotely power on shared office machines before shifts.

Education

Fenwick Cross College, Fenwick Cross

May 2019

Bachelor of Science in Health Sciences; Minor in Information Systems

Coursework: Healthcare Operations Management, Applied Information Systems

Skills & Interests

Language: C#, Java, SQL

DevOps: Kubernetes (Advanced)
