Education

Cardenal Bluffs University, Cardenal Bluffs Dec 2026
Bachelor of Science in Software Engineering; Minor in Public Health GPA: 8.9/10.0
Coursework: Mobile Application Development, Software Testing, Databases, Human-Computer Interaction

Projects

TT B141 Cognitive Risk Estimation Sep 2026 – Sep 2026
Python

- Built a Python system estimating cognitive-decline risk from a digital Montreal Cognitive Assessment, focusing on explainable outputs clinicians could interpret.
- Structured longitudinal follow-up data from the digital assessment, wanting the numbers behind the app to be trustworthy, not just functional.

mHealth Android App Jan 2026 – Sep 2026
Kotlin

- Developed a native Android app in Kotlin with Room and Coroutines for local-first emotional tracking, guided meditation, and cognitive-stimulation exercises.
- Noticed the app's local tracking data could reveal usage patterns beyond feature testing, which shaped interest in the later data project.

Individual Software Engineering Project Mar 2025 – May 2025
Java, HTML, CSS

- Delivered an individual software engineering project in Java with an HTML and CSS front end, including automated tests and Docker packaging.

Activities & Extracurriculars

Cardenal Bluffs Data Curiosity Circle, Member Jun 2026 – Present

- Started informally comparing app usage logs with self-reported mood entries, curious whether the numbers matched what users actually said.

Skills & Interests

Language: Python, JavaScript, Java, SQL
Frontend: HTML/CSS
DevOps: Docker, Linux & Server Administration, CI/CD
Quality: Unit Testing
Mobile: Native iOS/Android
