Education

Ashcombe Institute of Technology, Ashcombe May 2027
Bachelor of Science in Computer Science; Minor in Human-Computer Interaction GPA: 3.7/4.0
Coursework: Operating Systems, Machine Learning Fundamentals, Interface Design Principles, Data Structures

Projects

Irisos Mar 2026 – Sep 2026
C, Assembly, Makefile, Shell

- Built a small operating system kernel in C and ARM assembly with continuous integration checking every commit.

Proai Jun 2026 – Aug 2026
Python, JavaScript, CSS, HTML

- Built a Python and JavaScript AI application with automated tests and Docker packaging, including the browser interface users interact with.
- Spent unexpected time adjusting how results were displayed after early testers misread the AI's output as more certain than intended.

Iris Bot Apr 2026 – Apr 2026
Python, numpy, xgboost

- Built a Python bot using numpy and xgboost, with an automated pytest suite and continuous integration.

Experience

Ashcombe Systems Lab, Ashcombe Mar 2026 – Present
Undergraduate Research Assistant

- Supported a low-level systems research group by testing early boot behavior on lab hardware.
- Noticed that debugging unclear boot failure messages made me pay closer attention to how information is presented, not just what it contains.

Activities & Extracurriculars

Ashcombe Design & Code Circle, Member Feb 2026 – Present

- Started attending interface-design critiques after realizing my technically correct tools were still confusing for other students to use.

Skills & Interests

Language: Python, TypeScript, C/C++
Frontend: Next.js, React, Tailwind CSS
Data: Data Analysis (pandas)
AI/ML: Machine Learning
DevOps: CI/CD, Linux & Server Administration, Docker
Quality: Unit Testing
Product: Technical Writing
