## Education

---

**Alderbrook Institute of Technology**, Fen Hollow Dec 2026  
Bachelor of Science in Computer Science; Minor in Statistics GPA: 3.8/4.0  
Coursework: Distributed Systems, Databases, Software Testing, Data Structures

## Projects

---

**PARENA** Aug 2026 – Sep 2026

C, Makefile, Shell, Starlark

- Built a C automation project with Makefile and Shell scripts, wiring continuous integration and an automated test suite across nearly 500 files.
- After an intermittent CI failure took a day to trace, added structured logging around the build steps that finally made the failure reproducible.

**EMILY** Jan 2026 – Sep 2026

Go, Shell, C, Python

- Developed a Go-based service for handling background workloads, adding CI and an automated test suite so teammates could confirm changes did not break other workflows.

## Activities & Extracurriculars

---

**Alderbrook Reliability Study Group**, Peer Reviewer Feb 2026 – Present

- Reviewed classmates' bug reports for a systems course and noticed missing reproduction steps, then proposed a short checklist covering environment, sequence, and expected behavior.
- Paired with a teammate confused by a flaky test suite, walking through log output together until the root cause, a shared test fixture, became clear.

## Skills & Interests

---

**Language:** C/C++, Go, Python, SQL  
**Data:** Data Analysis (pandas), Data Modeling  
**DevOps:** CI/CD, Kubernetes  
**Quality:** Unit Testing  
**Product:** Technical Writing
