Education

Briarcross University, Briarcross May 2023
Bachelor of Science in Computer Science; Minor in Game Design GPA: 3.5/4.0
Coursework: Computer Graphics, Software Engineering Practicum, Systems Programming, Data Structures

Projects

Mass Parent Tool, Personal Project May 2020 – May 2020
C#

- Wrote a Unity editor tool in C# to batch-parent objects, replacing a manual step teammates repeated during builds.
- Kept the tool small, editing two files, so it could drop into any Unity project without setup.

Ludum Dare 49 Entry, Personal Project Sep 2021 – Oct 2021
C#, HLSL, ShaderLab, C++

- Built a game submission for a five-day Ludum Dare jam in C#, HLSL and ShaderLab, writing custom shaders.
- Iterated the build across the jam's active days, shipping a playable entry under a tight deadline.

Unity Terminal, Personal Project Feb 2022 – Feb 2022
Python

- Wrote a Python command-line tool that operates Unity Hub functions from the terminal.
- Found more interest in building support tooling than gameplay code, a signal behind later enabling teams instead of just shipping features.

Activities & Extracurriculars

Briarcross Game Jam Collective, Tools Contributor Sep 2021 – Feb 2022

- During a jam, noticed teammates repeatedly parenting objects by hand in the Unity editor and wrote a tool to batch it.
- Extended the habit after peers asked for a way to launch Unity projects without opening the Hub GUI.

Skills & Interests

Language: C#, Python
Mobile: Native iOS/Android
