Education

Ashford Institute of Technology, Ashford Hollow June 2027
Bachelor of Science in Computer Engineering; Minor in Operations Management
Coursework: Software Project Planning, Computer Architecture, Data Structures

Projects

Gameboyx Aug 2023 – Jan 2025

C++, Python, GLSL

- Built a Game Boy (Color) emulator in C++, coordinating work across 77 files including CPU, PPU and audio subsystems.
- Sustained the project across 73 active days and 200 commits, sequencing feature work into stages rather than building everything at once.

Chip8 Emulator

Aug 2023 – Aug 2023

C, C++, CMake

- Wrote a Chip8 emulator command-line tool in C and C++ using CMake to manage the 159-file build.

Activities & Extracurriculars

Ashford Game Development Circle, Milestone Coordinator Sep 2024 – Present

- After the group's emulator subteam missed a handoff between graphics and audio work, unclear ownership stalled progress for a week.
- Set up a shared milestone list assigning one owner per subsystem and a weekly check-in to catch blocked work early.
- Found that clarifying ownership unblocked more progress than personally debugging every issue, and started favoring that role.

Skills & Interests

Language: C/C++, C#
